MyChart Bedside at the Center of Acute Care at Home

Optimizing Epic's Patient Portal for Home Hospital Patients

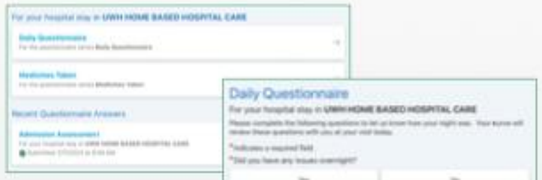

Mandy McGowan, BA RN

Mandy McGowan, RN BA
Director of Home-Based Care Programs, UW Health

Brad Ehlenfeldt, BBA
Applications Principal, UW Health

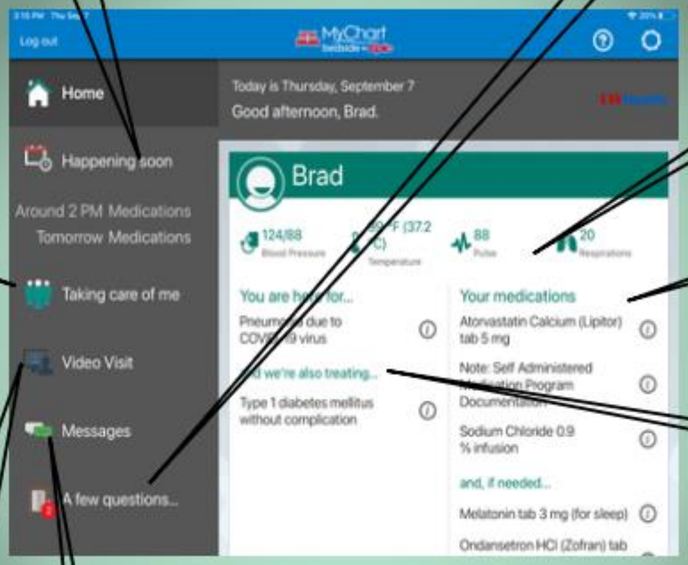

This is where I see who is coming to visit and when they will be here.

This is how I start my day and connect with my care team.

ENGAGE

These are my latest vital signs.

My scheduled and as needed medications are shown here.

LEARN

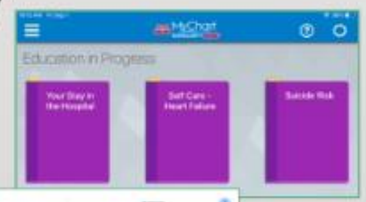

This is where I learn about my diagnosis.

This is where I learn about my care team.

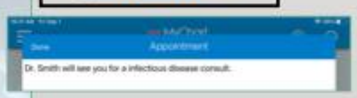

COMMUNICATE

Tablet Home Screen

This is where I'll connect to my care team and have specialty consult visits.

This is where I can send a message to my care team.

UWHealth

ENGAGE

Daily Questionnaire

The patient begins their day with a series of questions focused on their overnight experience and their goals for the upcoming day. This information is used by the Care Team to prioritize patient visits and keep the patient and caregivers involved in their care.

Visit Schedule

All visits (in-person and virtual) are scheduled in the EMR under the Home-Based Hospital Care department. The patient has full access to their daily schedule, along with details about the WHO, HOW, and WHEN of the visit.

Medications

Patients can see their scheduled and prn medications, along with medication information, in one easy place.

Vital Signs

All vital signs are obtained via Bluetooth-enabled devices that sync the data immediately to the patient's EMR via a cellular connection, allowing both patients and care team to have instant access to the data.

COMMUNICATE

Messaging & Video Visits

Patients are able to communicate with their Home-Based Hospital Care team through the messaging app. Virtual visits are done with a click of a button, allowing easy connection to the care team and consulting providers.

LEARN

Patient Education

Patient-specific care plans are created in the EHR, including standardized educational documents that are pushed to the patient via the tablet. When a patient reviews the content, the progress is noted in the patient's record. The patient education documents remain available to the patient in the EHR patient portal after hospital discharge.
